ALGAL REPORT

| CLIENT: | Australian Laboratory Services Pty Ltd SA | | | | | |
|---------------------------|-------------------------------------------|--|--|--|--|--|
| LABORATORY NO./BATCH NO.: | 7064969 21-32332 | | | | | |
| LOCALITY: | EM2112381-014 | | | | | |
| SITE: | Mark Point | | | | | |
| SAMPLE: | Surface | | | | | |
| DATE SAMPLED : | 28/06/2021 | | | | | |
| DATE ANALYSED : | 5/07/2021 | | | | | |
| SAMPLED BY: | Sample analysed as received | | | | | |

COMMENTS: + A moderately diverse community of algal taxa was observed. Current levels are unlikely to influence water quality.

A Certificate of analysis will follow, linked by the above batch number. Independent algal reports are forwarded to clients expeditiously to facilitate operational decision making.

^{*} P's and T's denote those cyanobacteria/blue-green algae (BGA) associated with toxin production in Australian waters. Overseas studies have shown other cyanobacteria to produce toxins. All contain lipopolysaccharides (LPS) in their cell wall and many have been found to produce β-N-methylamino-L-alanine (BMAA) and its analogues. Therefore all cyanobacteria could be considered to pose a level of risk.
